Scientific bio

I am a physicist of the ATLAS collaboration at the LHC, formerly CMS. I have been involved in Higgs boson physics since the start of my PhD, covering the search for the Higgs boson in WW decays; all the way until the observation of $t\bar{t}H$ in 2018, being the Higgs to WW subgroup convener. In 2011 I started studying the top quark, becoming the single top subgroup convener after achieving the first observation of single top tW .

I coordinated the whole Top Quark Physics Analysis Group in CMS from 2016 until 2018, when I left CMS to join the Uppsala ATLAS group after obtaining an individual starting grant. While in CMS, I worked extensively in detector operation, in the DT Muon chambers, and the Silicon Strip Tracker.

Currently I am the Outreach & Education coordinator in ATLAS, and I am involved in the [Hardware Track Trigger \(HTT\)](#) project for the Phase-II Upgrade, where I provided the first test-vectors to be used by the boards. I do this in parallel to searching for the [Dark Sector](#) in final states including top quarks (ANA-EXOT-2019-17). Among other ongoing interests, long-lived particles at the HL-LHC (in ATLAS and CODEX-b) and beyond (FCC), and machine learning techniques for high energy physics are my top priorities.
