## Scientific bio

I was involved in Higgs physics since the start of my PhD, covering the [search for the Higgs boson](#) all the way to the observation of  $t\bar{t}H$  in 2018. I was the Higgs to WW subgroup convener in the CMS experiment 2015/16. In 2011 I started studying top quarks, becoming the single top subgroup convener in 2013 after achieving the [first observation of single top  \$tW\$](#) . I coordinated the whole [Top Quark Physics Analysis Group](#) in CMS from 2016 to 2018, when I left CMS to join the Uppsala ATLAS group with an individual starting grant.

While in CMS, I worked in the DT Muon chambers, and the Silicon Strip Tracker. In ATLAS, I coordinated the [Outreach & Education](#) activity, and was involved in the Hardware Track Trigger for the Phase-II Upgrade. In both CMS and ATLAS I contribute to detector operation.

Currently, my group searches for [dark sectors](#) in unconventional final states, including [long-lived particles](#). Beyond this, [machine learning](#) techniques for high energy physics and the new physics reach of [future colliders](#) are my top priorities. Concerning the later I convene BSM groups for the [\(ECFA\) Higgs Factory Study](#) and within the Physics Performance group for the [Future Circular Collider \(FCC\)](#). In 2024 I was selected to be the [BSM physics working group convener for the 2026 Update of the European Particle Physics Strategy](#). I am consistently ranked among the highest cited Spanish scientists, being the 7th woman and first abroad in 2025 [link].
